International Retail Sales Analysis Using Excel

Project goal

Analyze international retail transactions to understand revenue by country, calendar month, price band, and invoice description.

What I did

Prepared the data in Excel and created summaries for completed and cancelled revenue. I checked the country, calendar-month, and price-band summaries against the Engineered data, then created charts for monthly revenue and the top invoice descriptions by completed revenue.

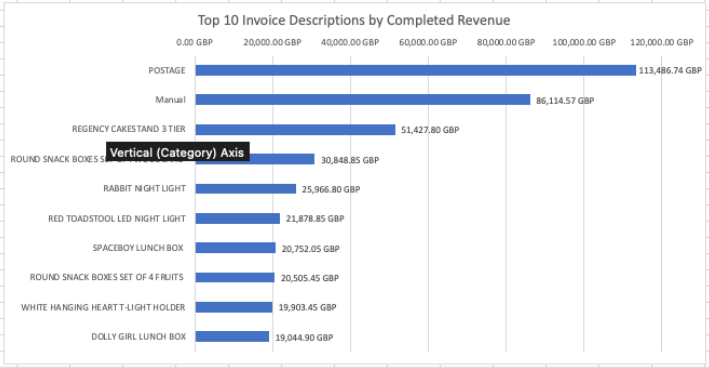

Key findings

Net revenue in Engineered was **£2,829,778.68**. EIRE had the highest net country revenue, while Nigeria had the lowest. October was the highest-revenue month and April the lowest in the calendar-month view, which combines all years. The Top 10 descriptions were ranked by completed revenue.

Data limitation

The workbook reports 84,756 non-UK records in Clean and 83,413 records in Engineered. The difference between those counts is not fully reconciled, so the summaries are validated against Engineered only.

Order_Status	Completed
Top 10 Invoice Descriptions by Completed Revenue	
Row Labels	**Sum of Revenue**
POSTAGE	113,486.74 GBP
Manual	86,114.57 GBP
REGENCY CAKESTAND 3 TIER	51,427.80 GBP
